Senator Ron Wyden
Ranking Member
Senate Finance Committee
219 Dirksen Senate Office Building
Washington, D.C. 20510

Congressman Jason Smith
Chair
House Ways and Means Committee
1139 Longworth House Office Building
Washington, D.C. 20515

Congressman Richard Neal
Ranking Member
House Ways and Means Committee
1129 Longworth House Office
Washington, D.C. 20510

Dear Honorable Chairmen Crapo and Smith and Ranking Members Wyden and Neal,

Domestic energy production holds the key to unlocking an era of innovation, independence, and American dominance. The American Energy Tax Credits, including the 25D Residential, 48E/45Y Tech Neutral, and 45X manufacturing credits are an essential part of America's winning energy strategy.

Solar and storage is a vast and growing industry, with approximately 300,000 Americans employed across the industry— including installers, manufacturers, suppliers, finance partners, distributors, and others who support them. We represent companies and workers in all 50 states and U.S. territories, rooted in small businesses and local communities. Together, we form a critical part of the American energy economy, and the jobs we've created are at risk without continued support.

Electricity demand and costs are growing at the fastest rate in decades, and the US requires an aggressive strategy to maintain leadership in AI, data centers, and other burgeoning technologies. Without rapid pursuit of energy deployment, we face the risk of runaway energy costs for businesses and consumers.

Millions across the country are already working to meet their own growing energy needs, using the 25D credit which helps deploy residential rooftop solar and storage. Residential rooftop systems help families lower and control their electricity bills, reduce grid infrastructure costs for all customers, and support a strong and growing US manufacturing base and jobs sector. Additionally, solar built under 25D takes pressure off the grid by freeing up energy for other purposes. Indeed, it is estimated that the US could install 731 GW of solar systems on residential rooftops.

As Congress advances its tax agenda to strengthen the American economy, we ask that you take into account the practical economic benefits afforded by American energy tax credits, including the residential credit 25D, and ensure that they remain in place.

We thank you for your work in ushering in a new era of American energy dominance, and we look forward to partnering in this shared endeavor.

Sincerely,

180 Solar Power
